CELERIS ROUTE, INC.

ACCOUNT SECURITY ACTIVITY RECORD

Account: CR-DRV-48217 | Account Holder: Daniel Reyes

Purpose of Record

This record summarizes account-security activity associated with the driver account following a reported unauthorized use of the account.

June 15, 2026 — Security Actions

Time	System Event	Record
9:12 AM	Password changed	Account password changed through the Celeris Route account-security function.
9:14 AM	Other sessions signed out	Account-security function used to sign out active sessions associated with the account.

The record does not show Daniel providing the new password or other authentication credentials to another person. The security activity occurred shortly after Daniel learned that another person had accessed the account.

June 21, 2026 — Subsequent Access

Time	System Event	Record
7:50 AM	Successful authentication	Device/session CR-MOB-1194 successfully authenticated to the account.
7:52 AM	Facial verification	The person completing facial verification did not match Daniel's enrollment image.

The security record does not identify the person who entered or possessed the credentials used for the authentication. It also does not establish how the subsequent credentials were obtained.

June 22, 2026 — Account Holder Follow-Up

Daniel's communications with Marco show that Daniel confronted him about the second incident and again instructed him not to access the account.

Record Limitations

This record establishes that password and session-security measures were taken after the first reported unauthorized use. It does not establish how the subsequent credentials were obtained, who entered them, or whether Daniel knowingly provided or permitted access after the security measures were taken.

Fictional evidence prepared for the DecisionLayer arbitration sample case. Account and event information is part of the fictional case record.
